

TA..... puzzle

Across

1. instrument used to find the dew point temperature
3. the process of coming together
4. a breeze in which a wind blows from a cool ocean surface onto adjoining warm land
5. the point of the temperature at which the air becomes saturated
7. a unit of temperature
11. the atmospheric conditions at a given location during a relatively short time
13. the process of spreading apart in different directions from a common point
15. the direction in which winds are deflected in the Northern Hemisphere
17. wind blow faster where the _____ in air pressure is greatest
20. a breeze in which a wind blows from land to sea
23. the turning clock direction of a low pressure system in the northern hemisphere
25. liquid to gas
26. Instrument used to measure wind speed

Down

2. water vapor turns into liquid
5. as altitude increases air pressure ____
6. another term for a prevailing wind
8. lines of equal atmospheric pressure
9. the air contains as much moisture as it can at a given temperature
10. expresses the percent of moisture in the air
12. winds are named by the ____ from which they come
14. formed of many tiny droplets of water
16. the turning clock direction of a high pressure system in the northern hemisphere
18. the effect on the path of winds caused by Earth rotation
19. instrument used to measure air pressure
21. when a mass of air ____ its density increases
22. the _____ of gases in the atmosphere exerts pressure on everything
24. when water vapor enters a mass of air, the air ____
